EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Gregory Gore on November 8, 2004.

The application has been amended as follows:

In the specification,

Page 7, *Line 19, "6" has been deleted.*

Page 8, *Line 10, "17" has been changed to - -10- - ,*
Line 22, "27" has been changed to - -10- - .

In the claims,

Claim 4, *Line 2, "comprising" has been changed to - -comprises- - .*

This amendment was performed to correct a minor grammatical error.

2. The following changes to the drawings have been approved by the examiner and agreed upon by applicant: In Figure 4, reference numeral "27" will be changed to - -10- - . In order to avoid abandonment of the application, applicant must make these above agreed upon drawing changes.

3. The following is an examiner's statement of reasons for allowance: Regarding **claim 1**, the prior art does not teach or suggest measuring periodically the slope of the force-deformation curve, determining when the slope of the force-deformation curve

changes from positive to negative, periodically comparing the deformation distance to a deformation setpoint, obtaining a force value by recording the maximum measured force when the slope changes from positive to negative prior to the deformation setpoint, multiplying the force value by a factor to obtain a stop force, and halting the applied force when the stop force is reached, in combination with the other claimed limitations; Regarding **claim 2**, the prior art does not teach or suggest measuring periodically the slope of the force-deformation curve, determining when the slope of the force-deformation curve changes from positive to negative, periodically comparing the deformation distance to a deformation setpoint, obtaining a force value by periodically calculating a force axis intercept of a straight line that is tangent to a recent point on the force-deformation curve and recording the force intercept drops below a predetermined value and the deformation setpoint has been exceeded, halting the applied force when the stop force is reached, in combination with the other claimed limitations.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
